EDUCATION

Indiana University

Master of Science - Computer Science; GPA – 3.84

August 2023 – May 2025

NMIMS' Mukesh Patel School of Technology Management and Engineering

Bachelor of Technology - Computer Science; GPA – 3.59

July 2019 – May 2023

PROFESSIONAL EXPERIENCE

Software Engineer

[SeeMe](#)

March 2026 – Present

New York, NY

- Architected end-to-end features using **Next.js**, **Postgres**, **Auth0**, and **Stripe**, driving ownership from DB schema and REST APIs to React UI and CI/CD pipelines across artist workflows, Open Call event wizards, monetization funnels, and admin CMS tooling.
- Re-architected SeeMe's end-to-end artwork upload pipeline using **IndexedDB**, **GCP Cloud Tasks**, and **Pinecone**, reducing user-facing upload latency by **90%** by offloading **Gemini Vision AI** tagging and vector indexing into background queue workers.
- Engineered an automated internal tool to extract historical collaborator forms from Drive using **Gemini** and asynchronously generate profiles, scaling the active artist base by **400%** while replacing manual workflows and Claude Cowork request timeouts.

Senior Consultant

Heartland Community Network

June 2025 – March 2026

Bloomington, IN

- Led frontend engineering for Chomp, a cross-platform recipe-sharing app, architecting a **React Native (Expo)** component library to deliver **20+** core features, including social feeds and AdMob monetization from concept to alpha launch in **3 months**.
- Developed Chomp's posts-first social feed and interactive engagement UI implementing likes, reposts and a nested comment and review modal, with **Google AdMob** card integrations to drive user retention and in-app monetization.
- Architected a hybrid state management layer using **TanStack Query** and **Redux Toolkit** in React Native and Expo, centralizing data-fetching hooks across core feeds to eliminate redundant API requests and fix asynchronous rendering bugs.

Full Stack Developer Intern

Hyphenova

August 2024 – December 2024

Los Angeles, CA

- Delivered **35+** responsive features using **React Native**, **Node.js**, **Tailwind CSS** and custom component libraries, improving UX consistency and input validation as measured by a **25%** reduction in form validation errors.
- Integrated **FastAPI** with **MongoDB** to build secure backend endpoints for account and session management, enabling robust support for JWT-based authentication and persistent user sessions.

Full Stack Engineer Intern

Y STEM & Chess Inc.

May 2024 – August 2024

Boise, ID

- Assisted in migrating the company's core platform from legacy **Angular** to **React**, restructuring modular component architecture and implementing dynamic routing via **React Router** to improve codebase maintainability and boost page load performance.
- Built responsive, API-integrated interfaces using **React**, **Bootstrap**, and **Axios**, validated across **10+** pages with **Postman**.

Software Engineer Intern

Indian Institute of Technology – Bombay

March 2022 – October 2022

Mumbai, India

- Spearheaded a critical **Moodle** platform upgrade by analyzing over **2,000** relational database tables and optimizing **32** key ones, resolving a major development and maintenance hurdle that had impacted the team for **7 years**.
- Engineered a comprehensive database migration pipeline by building automated **Python** AST and diff-parsing scripts to reverse-engineer undocumented **PHP** and **SQL** changes across **4,000+** lines of legacy code, accelerating migration timelines.
- Orchestrated a seamless platform migration ensuring **100%** data integrity and **zero** post-update bugs, along with a **MariaDB to MySQL** database transfer by resolving backend compatibility issues through system-level debugging in **Linux**.

PROJECTS & PUBLICATIONS

Listri Marketplace

- Architected a marketplace platform using **Next.js** and **Postgres** with Server Side Rendering to optimize listing discovery.
- Decomposed core workflows into microservices, containerizing services via **Docker** for automated deployment on **GCP Cloud Run**.

2048 iOS Application

- Engineered a multi-screen **Swift** application using **UIKit**, managing dynamic grid layout logic and user interaction flows.
- Implemented **CoreData** persistence to maintain game state across sessions and event-driven swipe gesture recognizers for state updates.

Conversational AI College Enquiry Chatbot: <https://doi.org/10.22214/ijraset.2023.51324>

- Developed a chatbot using conversational AI, **Python**, **SQL** and **Microsoft Azure Services** to replace the university's rule-based chatbot.

SOFTWARE SKILLS

Programming Languages: Python, Java, C, C++, JavaScript, TypeScript, SQL, Kotlin, Swift, Go, PHP, R, MATLAB

Web & App Development: React, Angular, Next.js, Node.js, Express, Expo, Android Studio, Xcode, HTML, CSS, Tailwind, REST API, Auth0, Google Cloud Tasks, GCS, GTM, Stripe

Databases: SQL, MongoDB, Postgres, Pinecone, Firebase, MariaDB, MySQL, NoSQL, DynamoDB

Tools, Skills & Concepts: Cursor, Claude, Google Gemini / Vertex AI, Data Structures, User Interface, Algorithms, Machine Learning, Linux, Git, Jira, Postman, Version Control, Operating Systems, MacOS, Windows, Android, iOS, Multimodal AI
